

**Alberto Baldacci** is a Scientist the Reconnaissance, Surveillance, and Networks Department at the NATO Undersea Research Centre in La Spezia, Italy. He graduated in Telecommunication Engineering and received his PhD in Information Engineering from the University of Pisa in 1997 and 2000, respectively. During this period his research focused on remote sensing for oceanography. In 1999 he worked for the Italian Navy on the analysis of infrared video sequences for target detection and recognition. He is currently working on signal processing architectures and algorithms for low frequency active sonar applications, such as broadband environmentally adaptive sonar and multistatic sonar.
